

Learning Log: Define problems and ask questions with data

Instructions

You can use this document as a template for the learning log activity: Consider how data analysts approach tasks. Type your answers in this document, and save it on your computer or Google Drive.

We recommend that you save every learning log in one folder and include a date in the file name to help you stay organized. Important information like course number, title, and activity name are already included. After you finish your learning log entry, you can come back and reread your responses later to understand how your opinions on different topics may have changed throughout the courses.

To review detailed instructions on how to complete this activity, please return to Coursera: [Learning Log: Define problems and ask questions with data.](#)

Date: <enter date>	Course/topic: Course 2: Ask Questions to Make Data-Driven Decisions
	Learning Log: Define problems and ask questions with data
Summarize your findings	<p>Create a summary of key information you think a stakeholder would need to know about this project. In this case, your stakeholder could be a member of the executive team, like a project manager. Here are some questions to help you get started:</p> <ul style="list-style-type: none">• What is the problem?• Can it be solved with data? If so, what data?• Where is this data? Does it exist, or do you need to collect it?• Are you using private data that someone will need to give you access to, or publicly available data?• Who are the relevant sponsors and stakeholders for this project? Who is involved, and how?• What are the boundaries for your project? What do you consider “in-scope?” What do you consider “out-of-scope?”• Is there any other information you think is relevant to the project?• Is there any information you need or questions you need answered before you can begin?
Reflection:	Write 5-7 sentences (100-140 words) summarizing the key questions, the data available, and the answers or insights you have gained so far
Questions and responses:	<p>What is the problem this tool will solve?</p> <p>How many online platforms do we need to monitor?</p> <p>How much time in the past and future do we need the data of ?</p>

	<p>How much time do we need to develop the tool.</p> <p>What do we consider out of scope.</p> <p>How much data do we need to collect in order to get started with the project.</p> <p>What should be added to the online dashboard for the shareholders to monitor.</p>
